

EQUIPMENT LIST

Few commercial printers can boast the extensive knowledge, capabilities, and commitment to high quality standards that EarthColor can. Our processes are focused on producing commercial print products and our capabilities include: digital and variable data printing, sheetfed printing with inline aqueous and UV coating, web printing with inline imaging and finishing, full bindery and finishing operations, fulfillment, and mailing. At EarthColor, our strength is in managing and producing high quality, complex print projects.

am4m

EarthColor's automated manufacturing for marketing (am4m) solution, streamlines the process of producing and distributing marketing materials to develop effective print campaigns. With three different submission models available, clients are able to select a submission method that is most suitable for their organization.

- ✓ *Data2Print* – enables users to upload their data directly into am4m.
- ✓ *Cloud2Print* – a system-to-system integration that gives am4m the ability to gather data from your organization's database.
- ✓ *Web2Print* – an interactive web-based platform that enables users to create and upload design templates to your platform.
